

1. About the replacement of Vaccine type used for Individual vaccination

We would like to inform you that the vaccine administered for booster vaccination will be switched from Pfizer to Takeda/Moderna for individual vaccination provided at medical institutions.

With the amount of Pfizer vaccine currently indicated by the government, it will not be possible to supply the vaccine to all medical institutions in the future. Therefore, from the week of February 28 (Monday), Takeda/Moderna vaccine will be administered for individual vaccination as well.

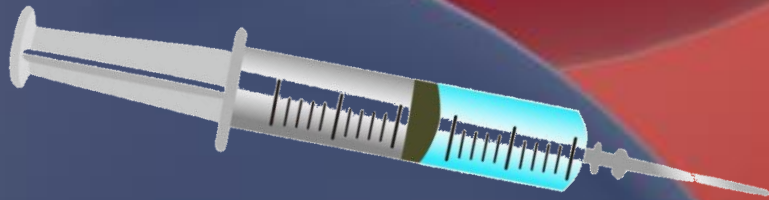

For the time being until the next supply of Pfizer vaccine, Takeda/Moderna is the only vaccine used for vaccinations in Yokkaichi, except for some medical institutions that provide the initial vaccinations.

In addition, we may consider resuming Pfizer vaccine based on the supply status of Pfizer vaccine from the government and the vaccination status of Moderna vaccine.

About the replacement of COVID-19 Vaccine type and acceleration of Vaccine coupon deliveries.

2. Regarding further acceleration of Vaccine coupon deliveries

The vaccination interval will be updated to 6 months after completing the first vaccination series (second dose), for those under the age of 65.
